

A student perspective: Maths A Level

Why did you choose this subject?

I got a very good grades at GCSE and I want to peruse a career that includes Maths. It is a subject where I feel comfortable and I enjoy solving problems.

Give examples of what you have studied in this subject:

Binomial expansion, velocity distance time acceleration graphs and mechanics. You study Core maths throughout the course and then statistics and mechanics.

What do you enjoy most about studying this subject?

I enjoy mechanics because I think it's really challenging and different to what you study at GCSE.

What Advice to someone who is considering this subject:

Try to revise a topic once you go over it in class because that helps to remember it and do lots of practice questions after each topic. You also need to constantly go back and revisit each topic as you need to built up a foundation of skills to help with future topics. Do lots of exam questions so you get used to the style of the questions.

What subjects do you study alongside this one?

A level Psychology, A Level Business and BTEC Science

What are your plans Post-18?

I'm hoping to do an undergraduate course in Maths at university.
