

A student perspective: Science BTEC

Why did you choose this subject?

After GCSE's I had got good grades in all sciences. I didn't want to limit myself to only one so I decided to go into the subject that incorporated them all. I also liked to the idea of completing coursework as a major part of the qualification

Give examples of what you have studied in this subject:

The lymphatic system, waves in communication and electron shells and orbitals. The human body and responses., practical experiments.

What do you enjoy most about studying this subject?

For me I enjoy Physics but that's because I'm good at maths. However I also enjoy completing practical work and then being able to apply theory to practise.

What Advice to someone who is considering this subject:

Make sure all your course work is handed in by due date and that you keep on top of all your work. When preparing for your exams you need to make decent revision notes as you go along and do past papers for practice.

What subjects do you study alongside this one?

A Level Maths, A Level Business and A Level Psychology

What are your plans Post-18?

University to do an undergraduate degree in Maths.
